ABSTRACT:

PROBLEM TO BE SOLVED: To provide a data providing system, a data providing method, and a data providing program which reduce the load on a network and ensure accounting process when pay data is provided.

SOLUTION: A user terminal receives inputs of a message text and edition information on speech attribute of the message text, reads an edition parameter from a predetermined storing means, and creates a second speech synthesis message for trial listening for the inputted message text based on the read edition parameter and speech data for trial listening stored in a predetermined storing means. Next, the user terminal receives an input of determination of the created speech synthesis message and sends a message text determined upon the determination of the speech synthesis message and an edition result parameter to a server. The server receives the determined message text and the edition result parameter, and creates a first speech synthesis message for the received message text based on the edition result parameter and speech data for purchase stored in a predetermined storing means.
